FENTANYL, its analogs, and other potent opioids
HIGH RISK to First Responders

FENTANYL & ANALOGS/OTHER OPIATES

- synthetic opioids
- Fentanyl is 100x more potent than morphine, analogs can be even stronger
- skin permeable and easily inhaled
- can be white or coloured powder, or brown & pebbly (mistaken for, and used like, heroin)
- often pressed into tablets (e.g. fake Oxys)

SYMPTOMS OF EXPOSURE:

- severe sleepiness
- slow heartbeat
- difficulty breathing
- slow, shallow breathing or snoring
- cold, clammy skin
- trouble walking or talking

Fentanyl lethal dose = 2 mg
(approx 2 grains of salt)

YOU MAY BE AT AN OD, LAB, OR TABLETING OPERATION AND ARE AT HIGH RISK OF EXPOSURE!!

LOOK FOR:

- syringes, powders, green tablets
- cotton swabs with green substance (evidence of crushing & snorting tablets)

Unidentified white powder
Fake Oxy tablets crushed for snorting

Small bottles of colouring
Bullet-type blenders
Drug recipes
Scales
